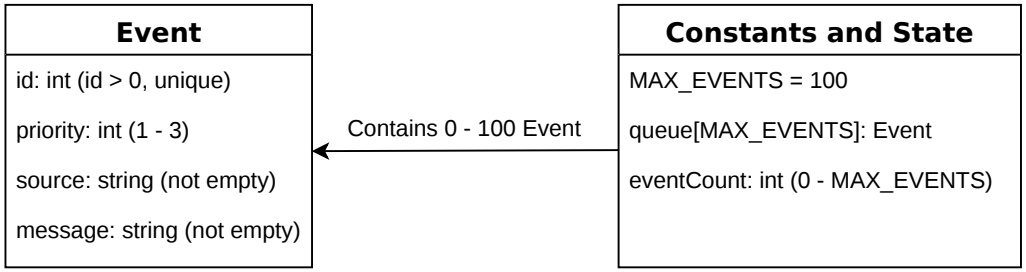
Data Model: Event Queue



1. Selection rule (for findNextEvent):

-Highest priority first (3 -> 1);

-If priority is equal, the smaller id goes first.

2. Removal (Array Shift):

-After removing element, the following elements shift left by one position, eventCount decreases by 1.

3. Validation rules:

-id > 0 and unique;

-priority in range 1 - 3;

-source and message are not empty;

-queue is full when eventCount = MAX_EVENTS(100)
